Accessories				
3.G030.08713	Lubricant			
3.0003.00770	Cleaning brushes			

T-slot system

The T-slot system is among the most convenient and process-secure type holder systems. The types can be replaced quickly and it is easy to set them in the slot. With the corresponding clips, you can quickly retain the types in the type holder.

During printing, the T form makes it almost impossible for the types to fall out. In addition, for cycle rates from 300 prints/minute, we recommend securing the types with screw stoppers and using a type holder with active clamping and a bayonet lock.

To obtain consistently good printing results over the long term, we advise regular cleaning to remove ink residues and dirt. For this purpose, we offer a set of very effective cleaning brushes.

Special types

Special types are frequently required. In such cases, we respond attentively to your design requests: Your company logo, specific lettering or symbols from the packaging industry.

We will be happy to advise you!
